SUMMARY

Data Analytics Engineer with experience building Power BI dashboards, data workflows, and backend analytics features using Python, SQL, and .NET. B.S. in Data Science from William & Mary with hands-on experience transforming, validating, and visualizing data to support decision-making. Brings strong technical foundations in analytics engineering, dashboard development, and stakeholder-focused reporting.

SKILLS

Technical Skills: Python, SQL, Power BI, Tableau, .NET, C++, JavaScript, HTML/CSS, Git, GitHub Copilot, Jupyter

Data & Analytics: Data Modeling, ETL/ELT, Data Validation, Dashboard Development, Data Visualization, Pandas, NumPy, Scikit-learn

EDUCATION AND TRAINING

College of William and Mary | Williamsburg, VA

Bachelor of Science in Data Science

May 2025

Relevant Coursework: Machine Learning, Data Structures, SQL & Databases, Applied Statistics, Data Visualization

EXPERIENCE

Data Analytics Engineer | RPower

07/2025 – Current

- Built dynamic, input-driven Power BI dashboards for a 3-4 person internal management team, breaking down revenue and profitability by business unit and partner and surfacing long-term trends across millions of parameter-based view combinations
- Collaborate with the engineering team to build and maintain reporting infrastructure and data workflows
- Apply SQL and Python to extract, transform, and validate data feeding into analytics dashboards
- Use GitHub Copilot daily to accelerate development, applying AI-assisted coding practices within a professional engineering workflow

Pitching Coach | Paradise Valley High School, Phoenix, AZ

05/2025 – Current

- Deliver individual and team pitching instruction using TrackMan and Rapsodo data — velocity, spin rate, and pitch shape — to tailor player-development plans
- Built and deployed a private web platform (hosted on PythonAnywhere) giving players individual accounts to track their development plans, alongside a coordinated team calendar

Uber Eats Delivery Partner | Uber Eats, Williamsburg, VA

09/2023 – Current

- Maintained a 4.9+ customer rating while independently managing route planning, customer communication, and time-sensitive deliveries

Student-Athlete | William & Mary, Williamsburg, VA

09/2023 – 09/2025

- Competed in Division I collegiate athletics while maintaining a full academic course load
- Demonstrated discipline, teamwork, and time management through year-round training and competition

PROJECTS

Golf Trip Scoring & Payouts Dashboard | Python, Firebase, Next.js, Vercel

- Built and deployed a live scoring app for a 15-player golf trip, tracking skins, net low round, low total for the week, and a rolling hole-in-one bonus
- Synced scores in real time across devices via Firebase, with a live leaderboard and money dashboard
- Supported dynamic course and tee selection as the trip moved between stops

Analytical Pitching Dashboard | HTML, CSS, JavaScript, Tableau

- Created interactive dashboard to visualize baseball pitch quality metrics
- Integrated player profile filtering and average calculation features
- Used Tableau and web tools to highlight statistical trends

Minimum Spanning Tree Library | C++, STL

- Implemented Kruskal's and lazy Prim's MST algorithms from scratch using STL priority queues and a custom union-find structure
- Verified correctness against an independent reference implementation across multiple test graphs
- Optimized Prim's implementation to use adjacency lists, reducing edge-scan overhead per vertex

Reviewdle — Guess the Movie | JavaScript, HTML/CSS, TMDB API, Trakt API

- Built and deployed a daily Wordle-style game where players guess a movie from a sequence of real reviews
- Sourced a dataset of 1,600+ movies and 5,500+ reviews via the TMDB and Trakt APIs; used a date-seeded hash for a shared daily puzzle
- Wrote a custom autocomplete to fix a mobile Safari crash, and shipped it end-to-end on a purchased domain via GitHub Pages
